What does a SaaS website actually cost?

The 5 things that move the price, and how to get a fixed quote.

01

Count templates, not pages

Ten pages that share three layouts cost far less than ten pages each designed from scratch.

02

Who writes the copy

If your positioning and headlines are ready, it's mostly build. If not, you're also buying strategy and copywriting.

03

Every integration adds work

CMS, analytics, CRM, scheduling, sign-up through your app. Each one is set up, tested and documented.

04

Built for speed and SEO

Fast on a mid-range phone, passing Core Web Vitals, with metadata, sitemap and redirects. Ask if it's included.

05

Design depth

Building from your existing brand is very different from inventing an identity, illustrations and motion.
