WCAG 2.2 · SaaS websites

Can every buyer actually use your signup form?

An accessibility checklist for your marketing site, in 6 parts.

Why it matters

The baseline across the web is poor.

95.9%

of the top one million home pages had detectable WCAG 2 failures.

Source: WebAIM Million report, 2026

The usual suspects are fixable: low-contrast text, missing alt text, missing form labels, empty links and buttons, no page language.

1 · Colour and contrast

Grey on white is not a style choice.

Aa

#9CA3AF on white

2.5 : 1 · fails

Aa

#03035E on white

17.8 : 1 · passes

1. **Body text: at least 4.5 : 1**
   check text over hero images and brand buttons first
2. **Large text, buttons, icons: 3 : 1**
   form borders and meaningful icons count too
3. **Never colour alone**
   green/red pricing ticks also need an icon or text

2 · Keyboard and focus

Unplug your mouse.

Now sign up, book a demo and open every menu.

1. **Everything works with Tab, Enter, Space, arrows**
   links, menus, tabs, accordions, form fields
2. **Focus is always visible** NEW IN 2.2
   and never hidden behind a sticky header or cookie banner
3. **Pop-ups hold focus, then hand it back**
   mobile menus, modals, demo-booking windows
4. **A “skip to main content” link**
   so keyboard users can jump past the navigation

3 · Signup and demo forms

Placeholder text is not a label.

1. **A visible label tied to every field**
   in code, not just placed nearby
2. **“Required” said in words**
   not only a red colour or an unexplained *
3. **Errors say what to fix**
   next to the field, announced to screen readers
4. **Autocomplete on name, email, company**
   so browsers can fill it in
5. **Paste and password managers allowed** NEW IN 2.2
   no memory puzzles at login

4 · Links, buttons, zoom

“Learn more” five times means nothing.

1. **Link text makes sense on its own**
   say where it goes: “See pricing”
2. **Icon-only buttons get a name**
   menu, close, play, social icons
3. **Tap targets 24 × 24 px or spaced** NEW IN 2.2
   small links crammed together fail
4. **Works at 200% zoom**
   and reflows to one column at narrow widths

Test it this week

No budget needed.

1

Run a free scan

WAVE, axe or Lighthouse. A clean score is a start, not proof.

2

Keyboard only

Sign up and book a demo without the mouse.

3

Screen reader

VoiceOver or NVDA are free. Listen to your form.

4

Zoom to 200%

Look for overlapping text and hidden buttons.
